

# Galactic Travel Token

## The Galactic Travel Token (\$GTT) summary

The Galactic Travel Token (\$GTT) will fuel all experiences in our ever-expanding ecosystem. \$GTT is an ERC-20 token built on the Polygon Chain (a Layer-2 scaling solution that drastically improves the functionality of the Ethereum blockchain).

## Why \$GTT?

Every year, gamers spend considerable amounts of time and money on their favorite games in order to achieve milestones, advance their progression or simply experience a different environment. Nevertheless, these investments continue to go unrewarded as players can never claim ownership of their in-game assets. Everything that the player has earned by committing endless hours and resources can be taken away at any moment by the game publishers. This can have a detrimental effect on the longevity of games and pushes committed players away reducing retention and engagement.

Like all things, the gaming industry has gone through many changes since its inception. Terms like Pay-to-Play gave way to Free-to-Play and eventually to the dreaded Pay-to-Win. Though some of these models have been more successful than others, they equally lack two things:

- Value the players time
- Creating a sense of true ownership from the player

These have always been flaws of the traditional gaming industry; flaws that we are looking to address.

Enter the Play-to-Earn model which is simplicity in itself: players are compensated for playing.

We firmly believe that the player's time is valuable and as such must be rewarded. This is done in the form of our \$GTT token. As the core currency within the games ecosystem, \$GTT is designed to enrich the Play to Earn loop, which holders can use to craft new NFTs, make in-game purchases and stake for extra rewards. One of the unique aspects of our economy is the Staking Rewards Pool (all NFTs used in the game can be staked to earn passively).

## \$GTT Objectives

The main goal of \$GTT is to instill in the player a sense of True Digital Ownership. By awarding an ERC20 players can easily exchange their tokens for in-game assets or exchange them with other players in a safe and secure way without a middleman. They will own their potentially appreciating in-game assets until they decide to part with them. This means that players spending time and tokens for in-game items will be able to actively work to increase their value.

By granting players ownership of their assets, we allow them to create value for themselves, other players and the Developers bringing into existence a true alignment of incentives. This will in turn create a vibrant economy and an increased demand for \$GTT.
